

AMAZON PARROTS

Found in the jungles of South America, these New World Parrots have a long history of doing amazing feats in human language. There are over 30 different species of Amazon Parrot, many of which are critically endangered. Their colorful voice and amazing colors of their bodies are long sought after by people.

The Blue Headed Amazon is featured here at Seattle Parrot Expo. Other common amazon species in the US are double yellow headed amazons, yellow naped amazons and mealy amazons, to name a few.
